

# Frontend Engineer x Product Designer

I work hard to ensure the products I create are beautiful, easy to use, and wonderfully satisfying.

## Lead Frontend Engineer and Designer at Sionic, Atlanta

- Created a SPA web plugin for facilitating “Real-Time Payments” transactions between consumer and business banks from within mobile banking apps.
- Designed and built an administrator portal in which business owners can interact with our database to easily monitor and update their data.
- Designed and developed Sionic’s re-branded website.
- Redesigned our entire Agile task management system in Notion to decrease bottlenecks.

At the *Omega Design & Development Co.* dev shop I worked with clients from a diverse set of industries. Designing and developing their digital presence from scratch, I provided them with quality, cross-browser compatible production software which increased target engagement by 80% on average.

## Programming Mentor

After work hours I have been teaching and mentoring; aiding in programming skills from absolute beginner to job-ready professional. I learned a lot through teaching, plus it helped me to solidify my previous knowledge.

Palvox is a charming app which allows you to send & receive anonymous audio messages and become audio pals with strangers. Created to be the most accessible social app for the blind and visually impaired.
